A route goes straight from its start dot to one point on the line, then straight to its finish dot. Touch between the end marks. Do not travel along the line. Use the dot centers.

Problem 1: Make several routes from A to B. Find two different routes that use the same length of string.

Problem 2: Can you make a route from A to B shorter than both drawn routes? Find the shortest one you can.

Problem 3: Make routes from A to B and A to C that touch at the same spot. Can one use less string than the other?

Problem 4: Find the shortest route from A to B.
