A route goes straight from its start dot to one point on the line, then straight to its finish dot. Touch between the end marks. Do not travel along the line. Use the dot centers.

Problem 5: Find the shortest routes from A to B and from A to C. Which needs less string?

Problem 6: Find the shortest route for each pair: A to B, A to C, and B to C.

Problem 7: Put a new dot above the line so its shortest route to B touches P. Can you put another dot that works?
