Problem 5: Put your cubes together with your partner's and make towers of 1, 2, 3, and 4 cubes. Find and draw every row of these four towers where you see just 1 tower from the left end. How do you know you have them all?

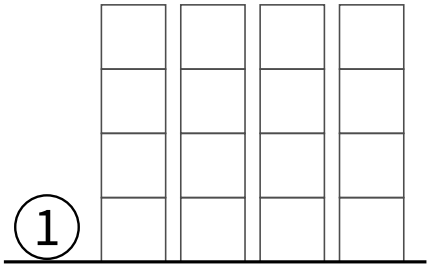

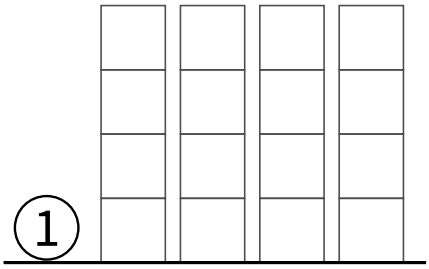

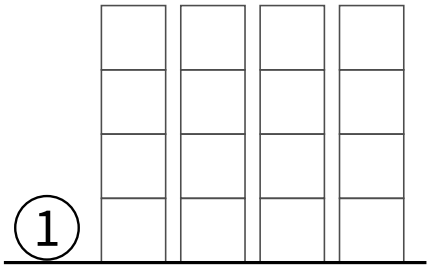

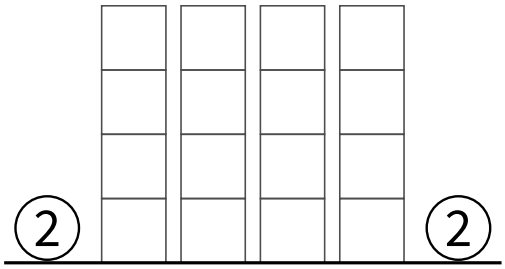

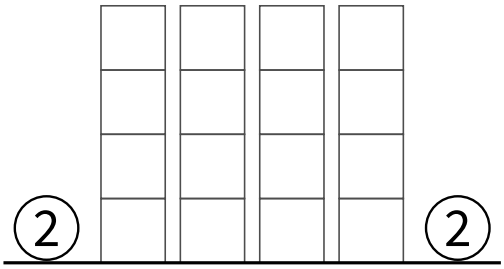

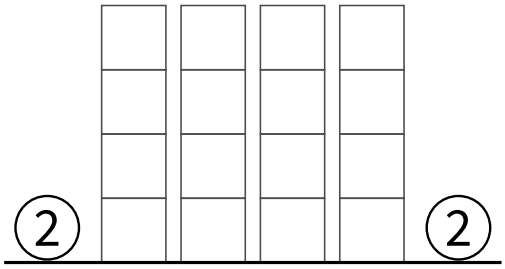

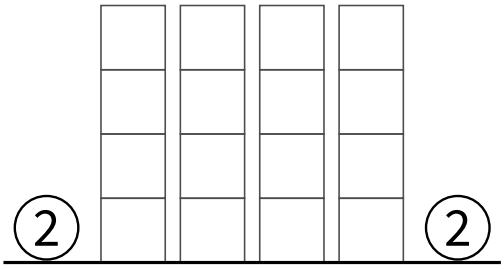

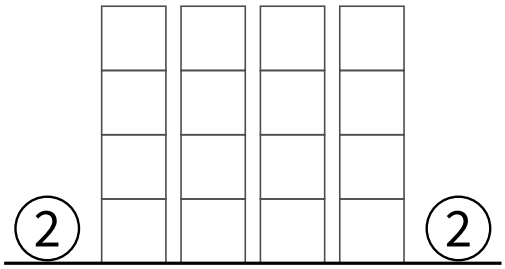

Problem 6: Find and draw every row of your four towers where you see 2 towers from each end.

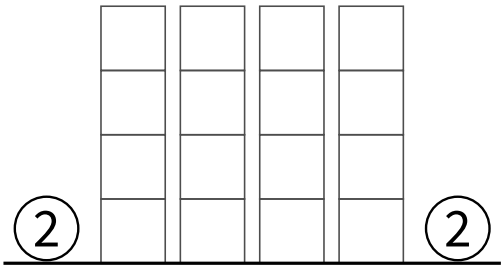

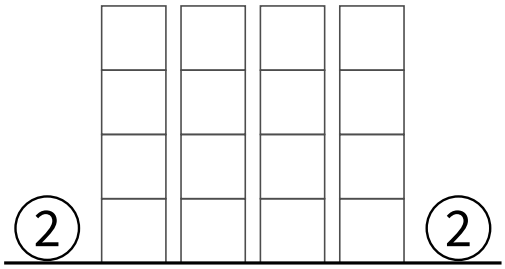

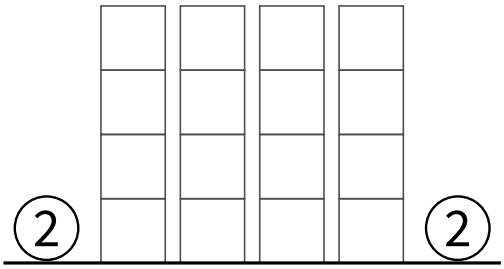

Problem 7: Build a row of your four towers that shows the two numbers on each card, and draw it. If no row can, put an X on the card and tell why.
