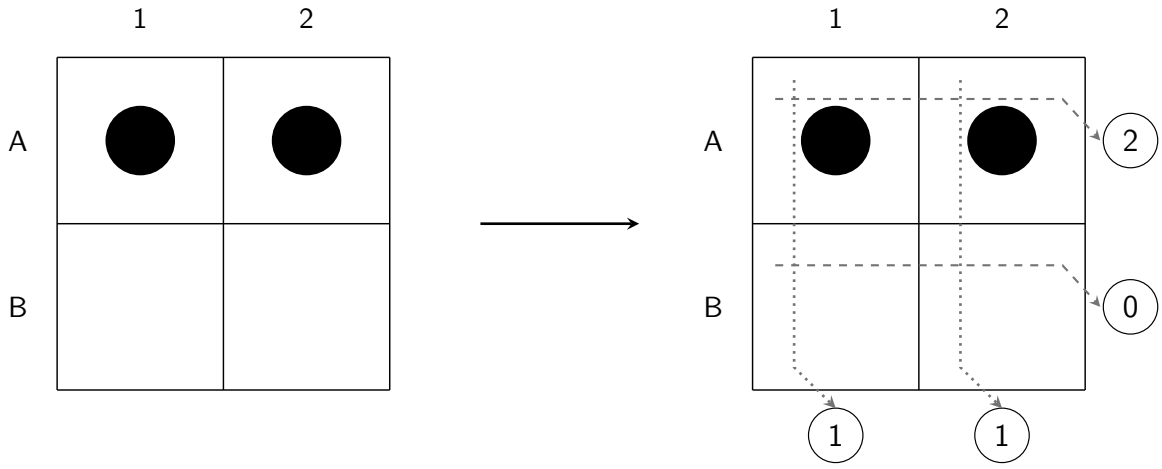
Each circled number counts the counters in its whole row or column. Put at most one counter in a cell. Two pictures are different if any cell is different.

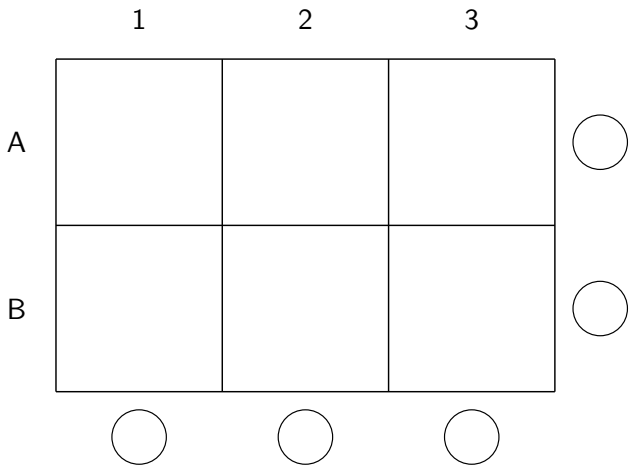
Example: two counters become row and column counts.

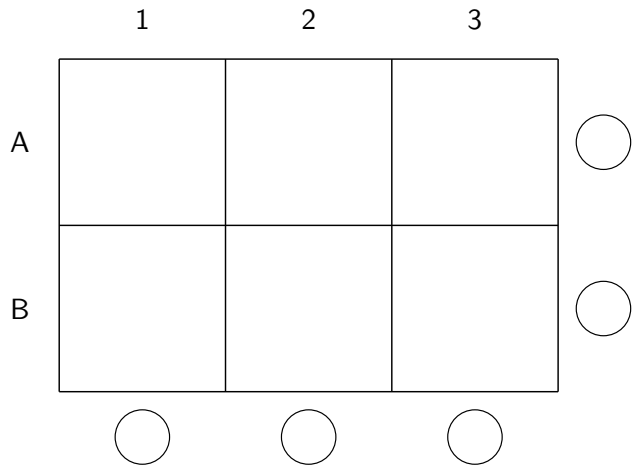


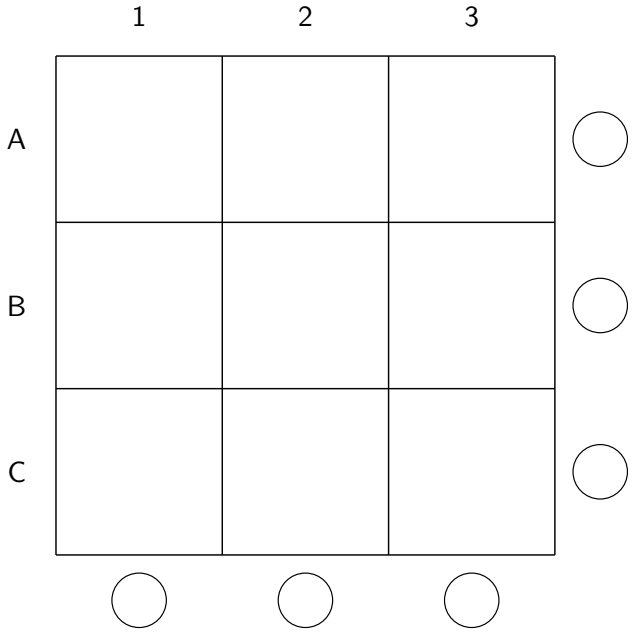
Across each row:

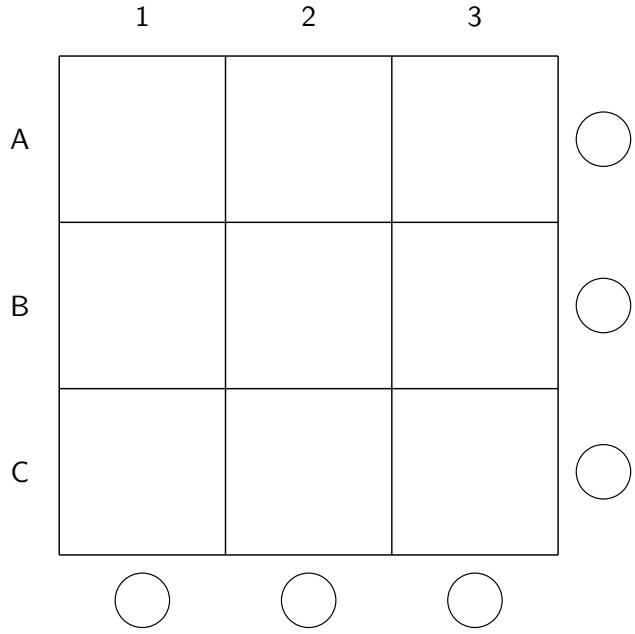
Down each column:

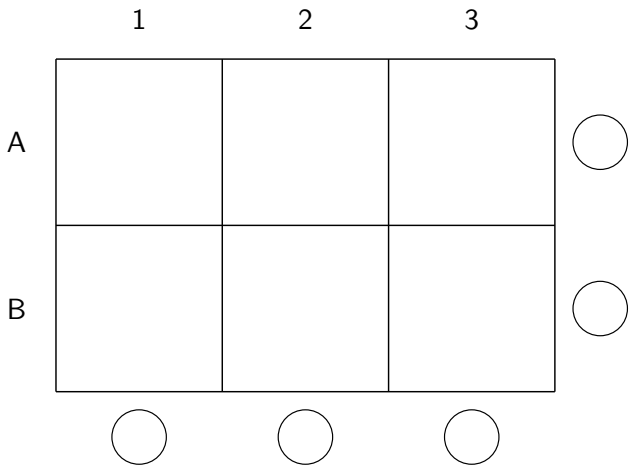
**Problem 5:** Make a four-counter picture on each left grid and write its counts. Can your partner make a different picture with those counts on the right grid?

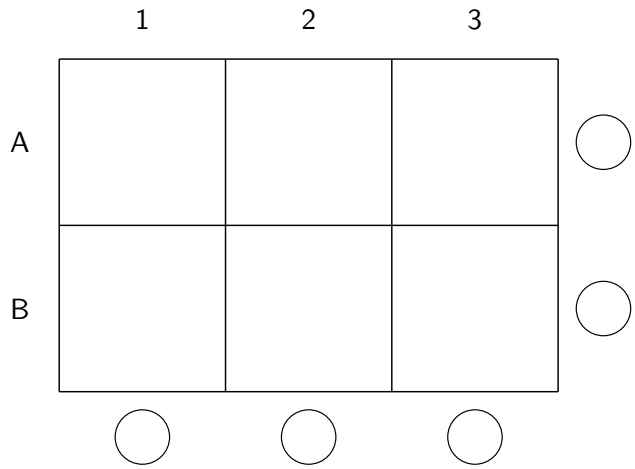


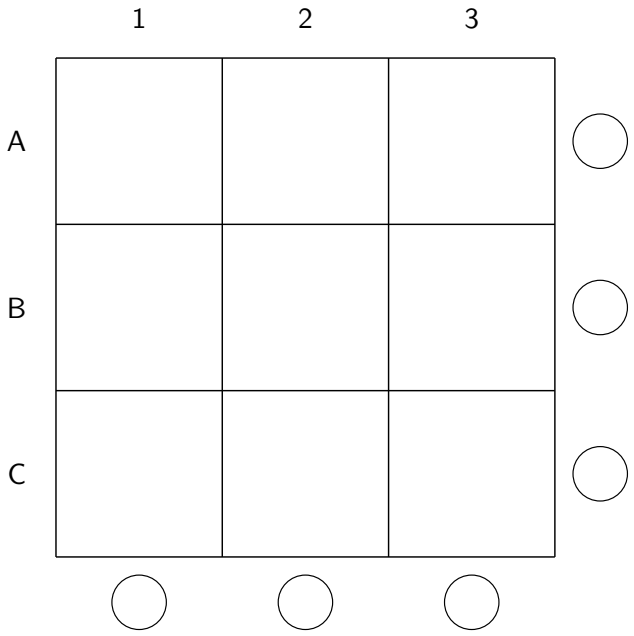


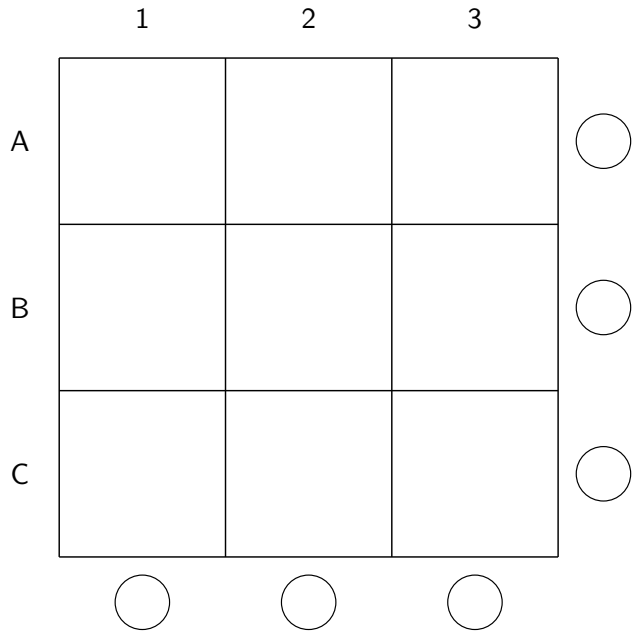












**Problem 6:** Draw a four-counter picture on each grid and write its counts. On the left grids, no other picture may fit your counts. On the right grids, another picture must fit them.
