Put one R, B, or Y counter on every dot. Keep the corner letters. Each outside side allows only the letters beside it. A little triangle has no lines inside.

Problem 4: Keep every printed letter. Fill the empty dots to make as many little triangles with R, B, and Y as you can.

Problem 5: Make just one little triangle with R, B, and Y, and draw an X inside it. Move the counters to put it in as many other places as you can. Draw an X in each new place.

Problem 6: The bottom side now allows R, B, or Y. Find a filling with no little triangle that has R, B, and Y. Then find a different one.
