Stand the two old towers on an arrow side by side. Build the extra part on the new mat, at the arrow's start. Keep the old towers until all four new towers are built. Then clear the old mat, move the new towers onto it, and drop a counter in the cup.

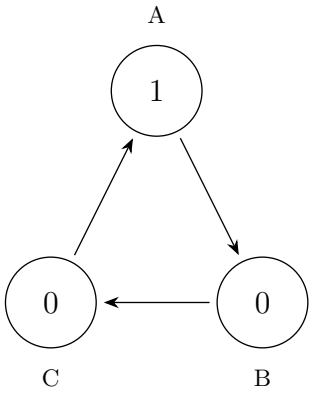

A has 1 and B has 4. The extra part is 3, so new A is 3.

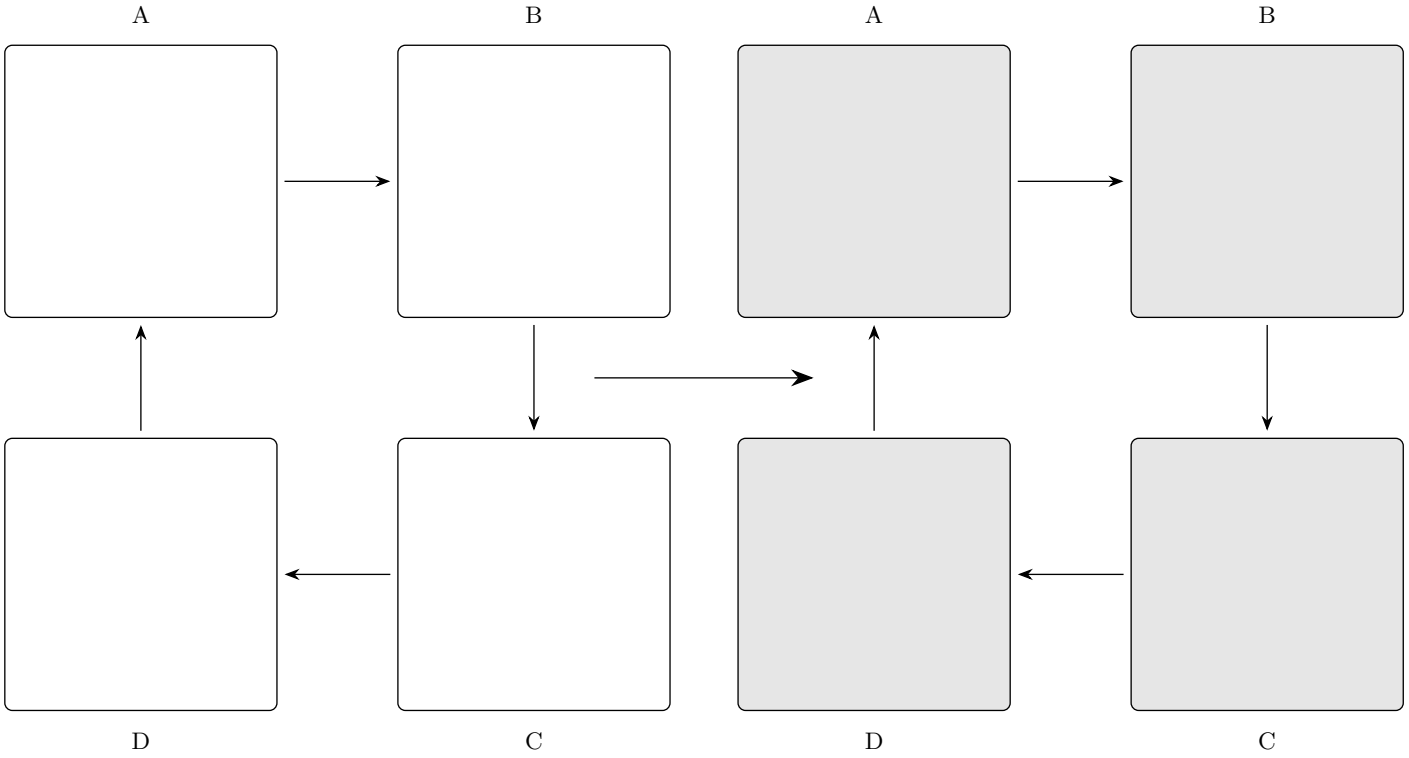

Problem 6: Try both starts with the same gap rule. Stop at all zeros or when the whole ring repeats.
