Join printed dots with straight lines until the whole shape is made of triangles. Every corner of every triangle must be a printed dot.

Problem 1: Fill each shape with triangles in two different ways.

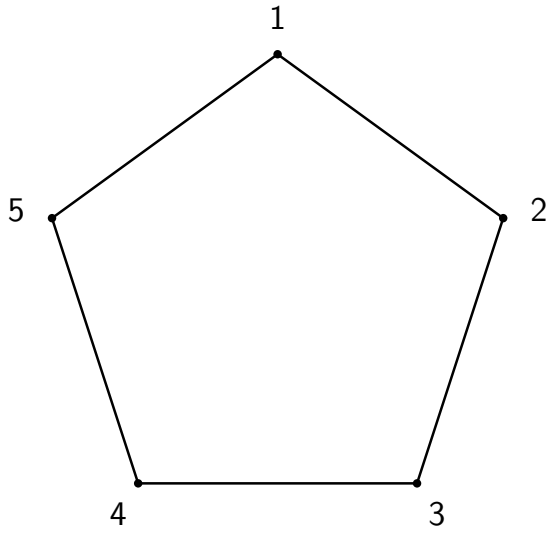

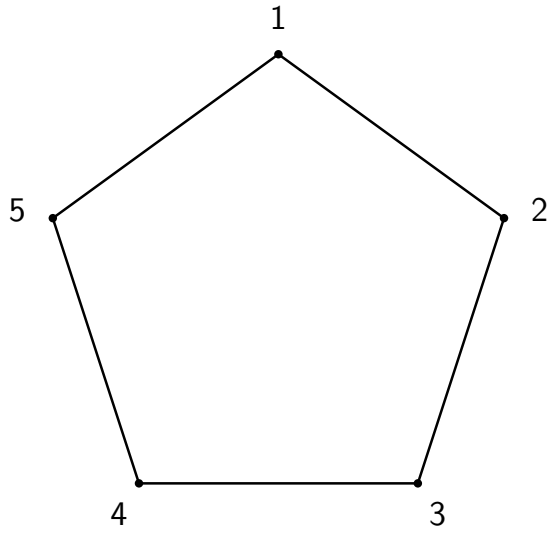

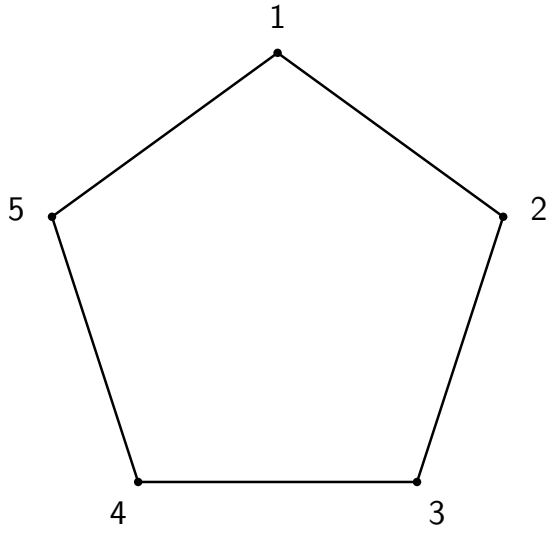

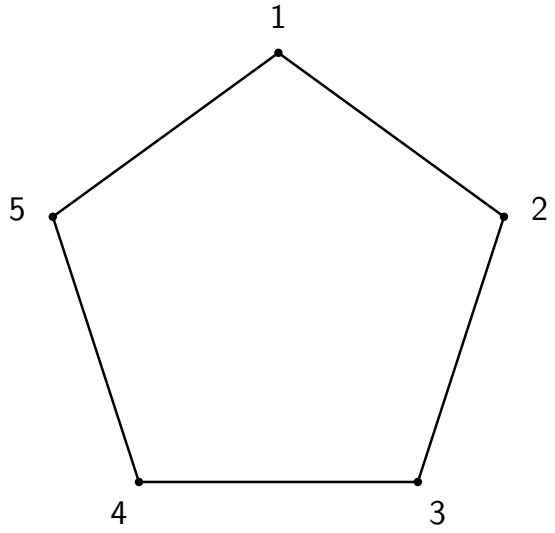

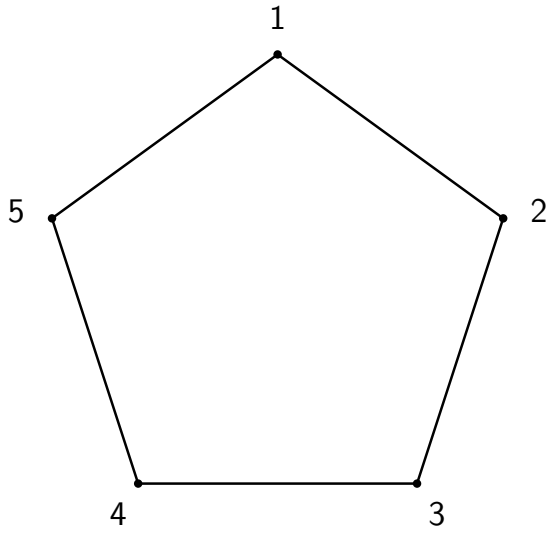

Problem 2: Find every way to fill this five-corner shape with triangles.

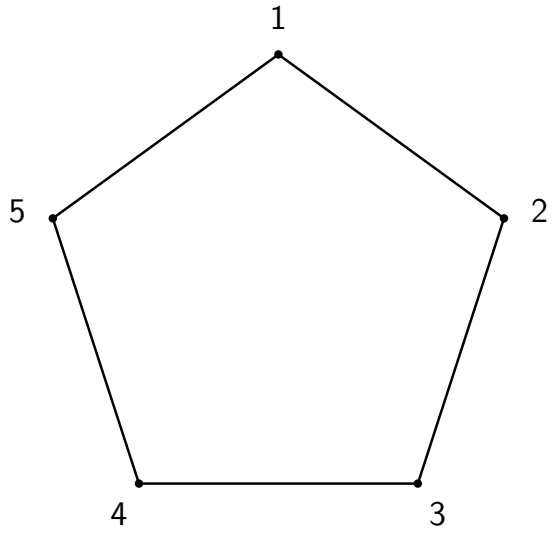

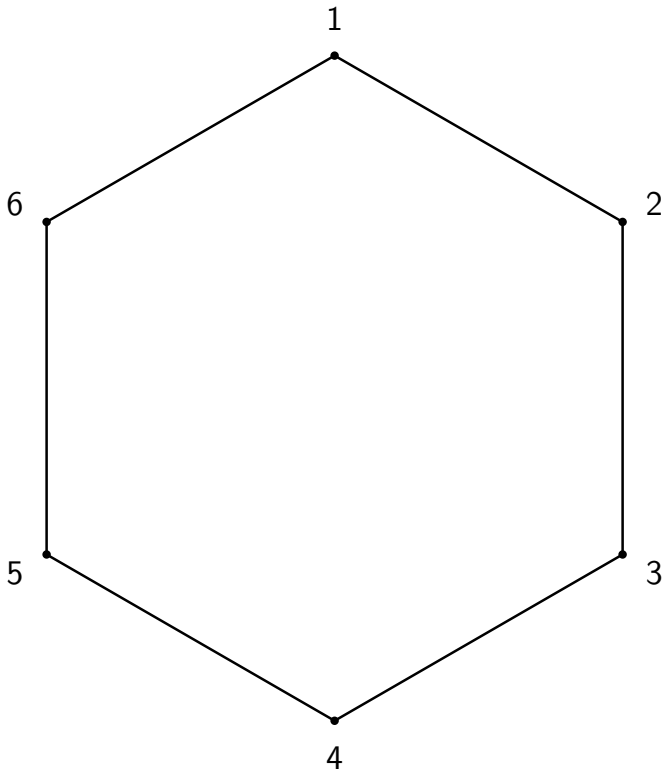

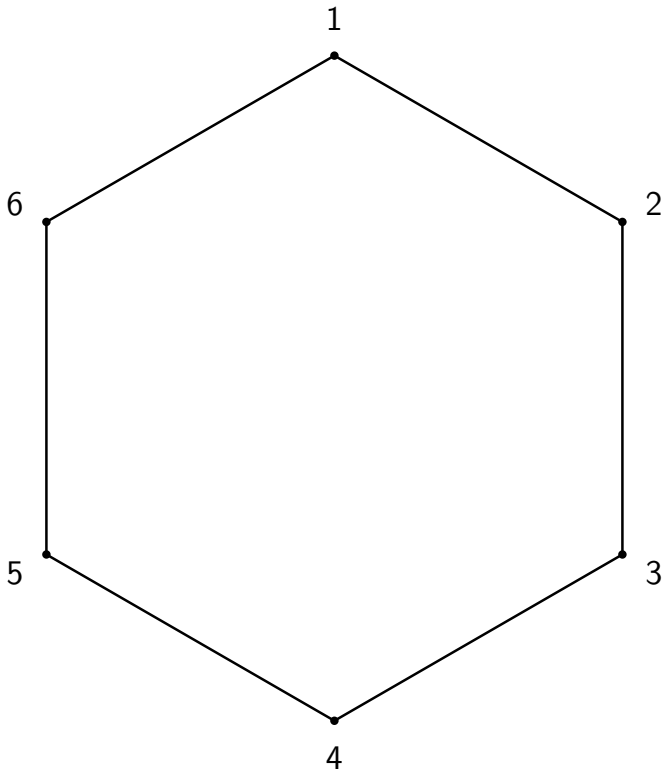

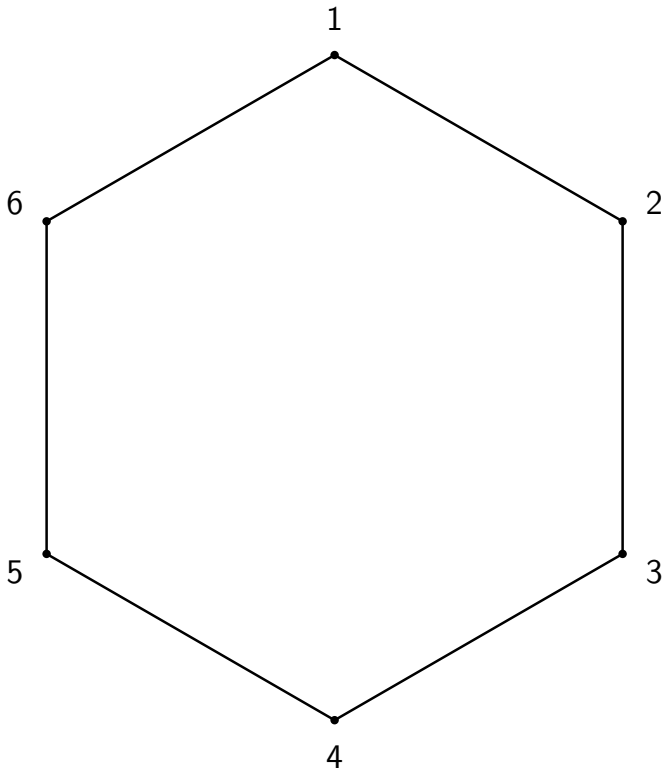

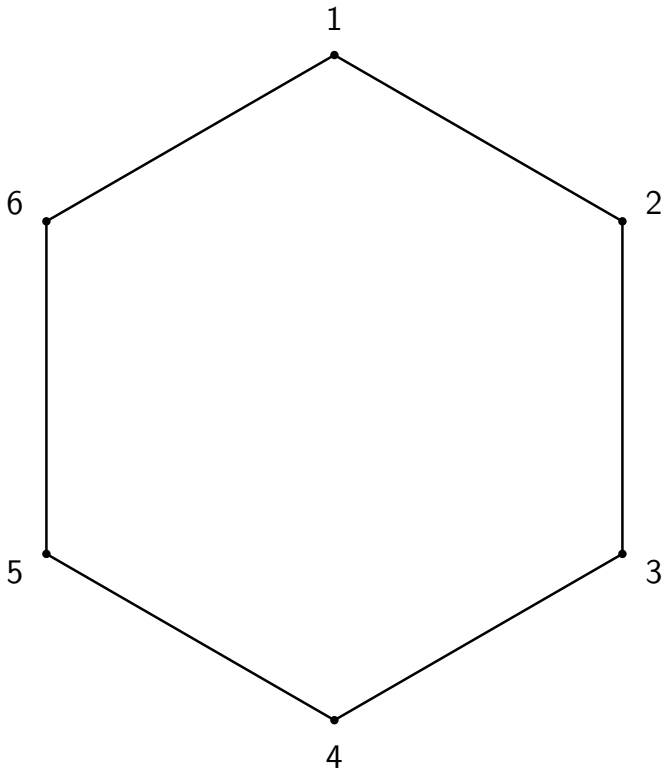

Problem 3: Can you fill this shape with 3 triangles? Can you fill it with 4 triangles?

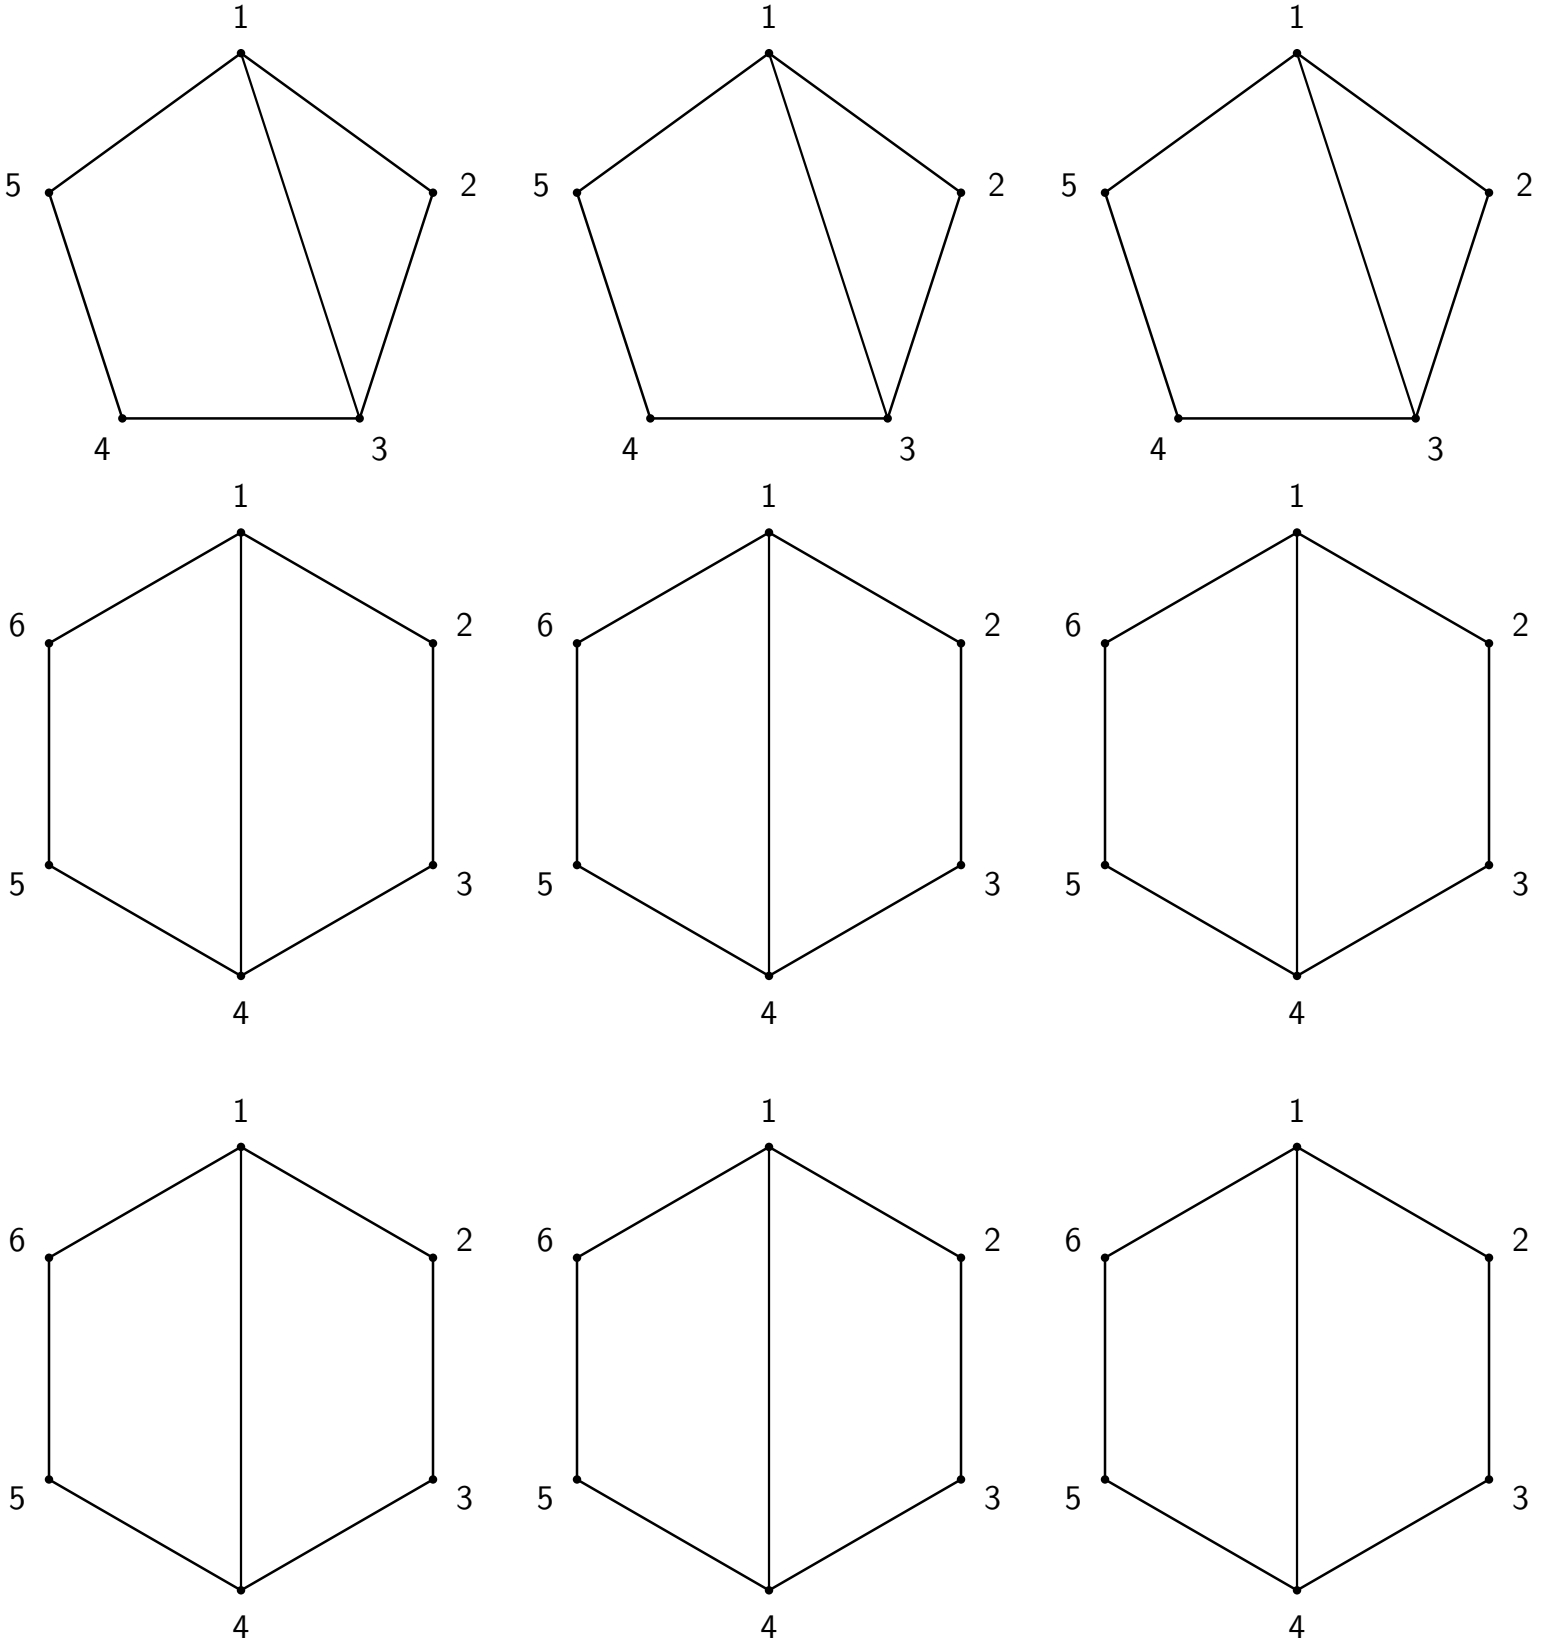

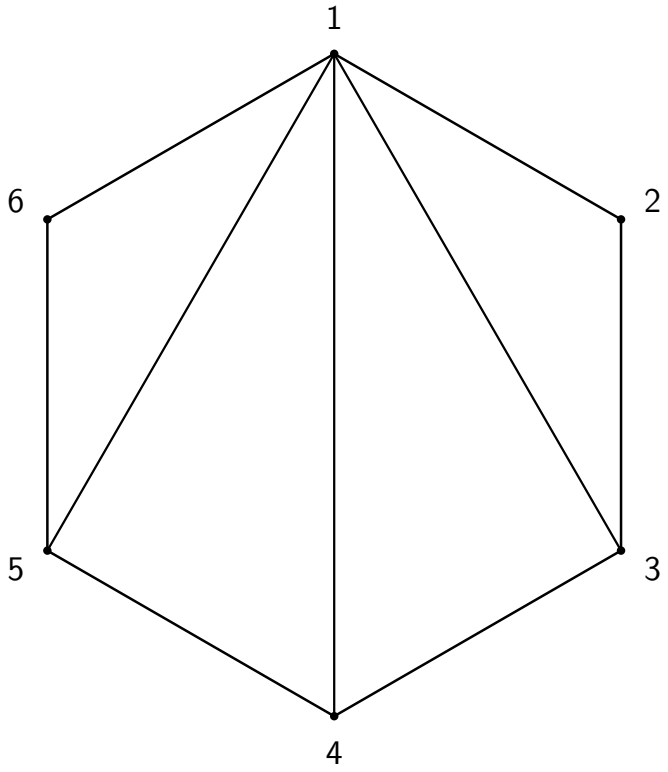

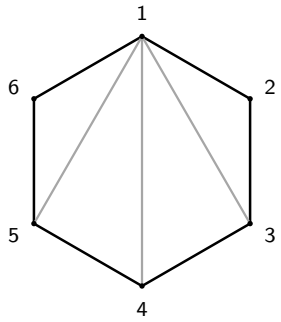

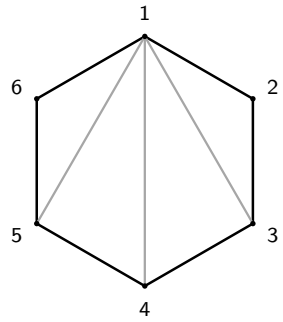

Problem 4: Fill each shape with triangles, keeping the printed line. Find every way.

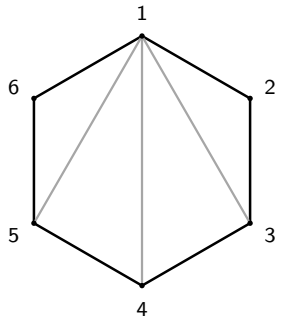

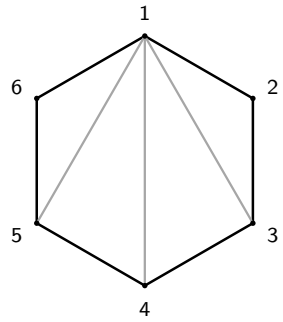

Problem 5: Erase one inside line and draw a different one. Keep the shape full of triangles and find every possible result from each drawing.

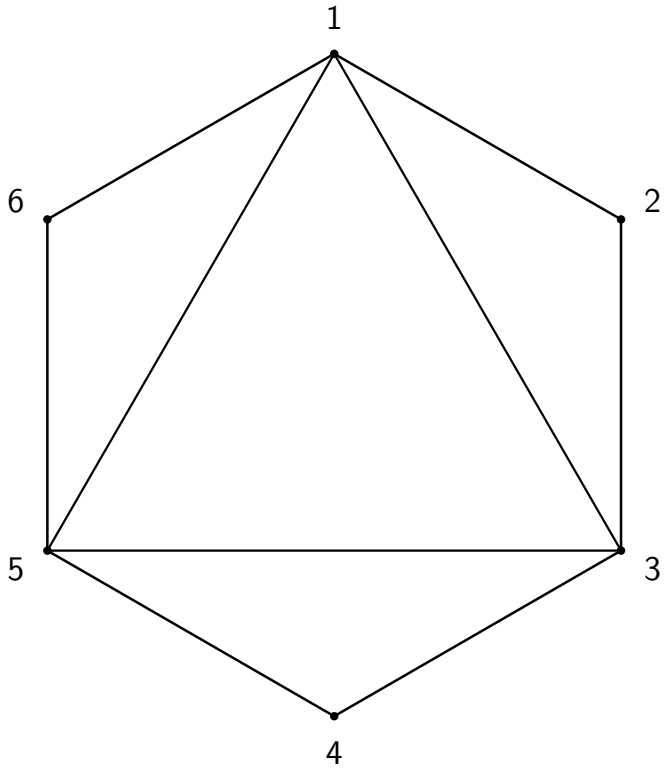

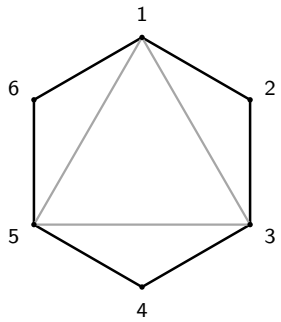

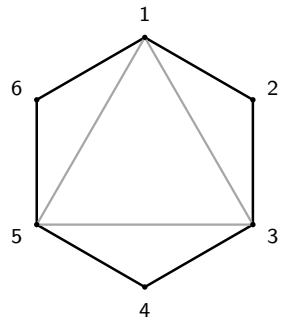

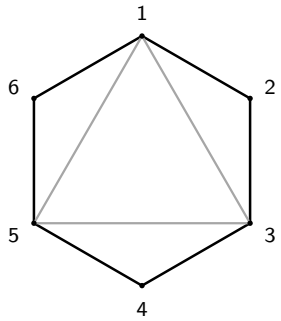

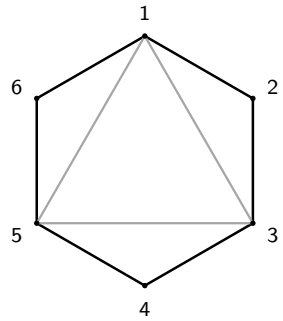

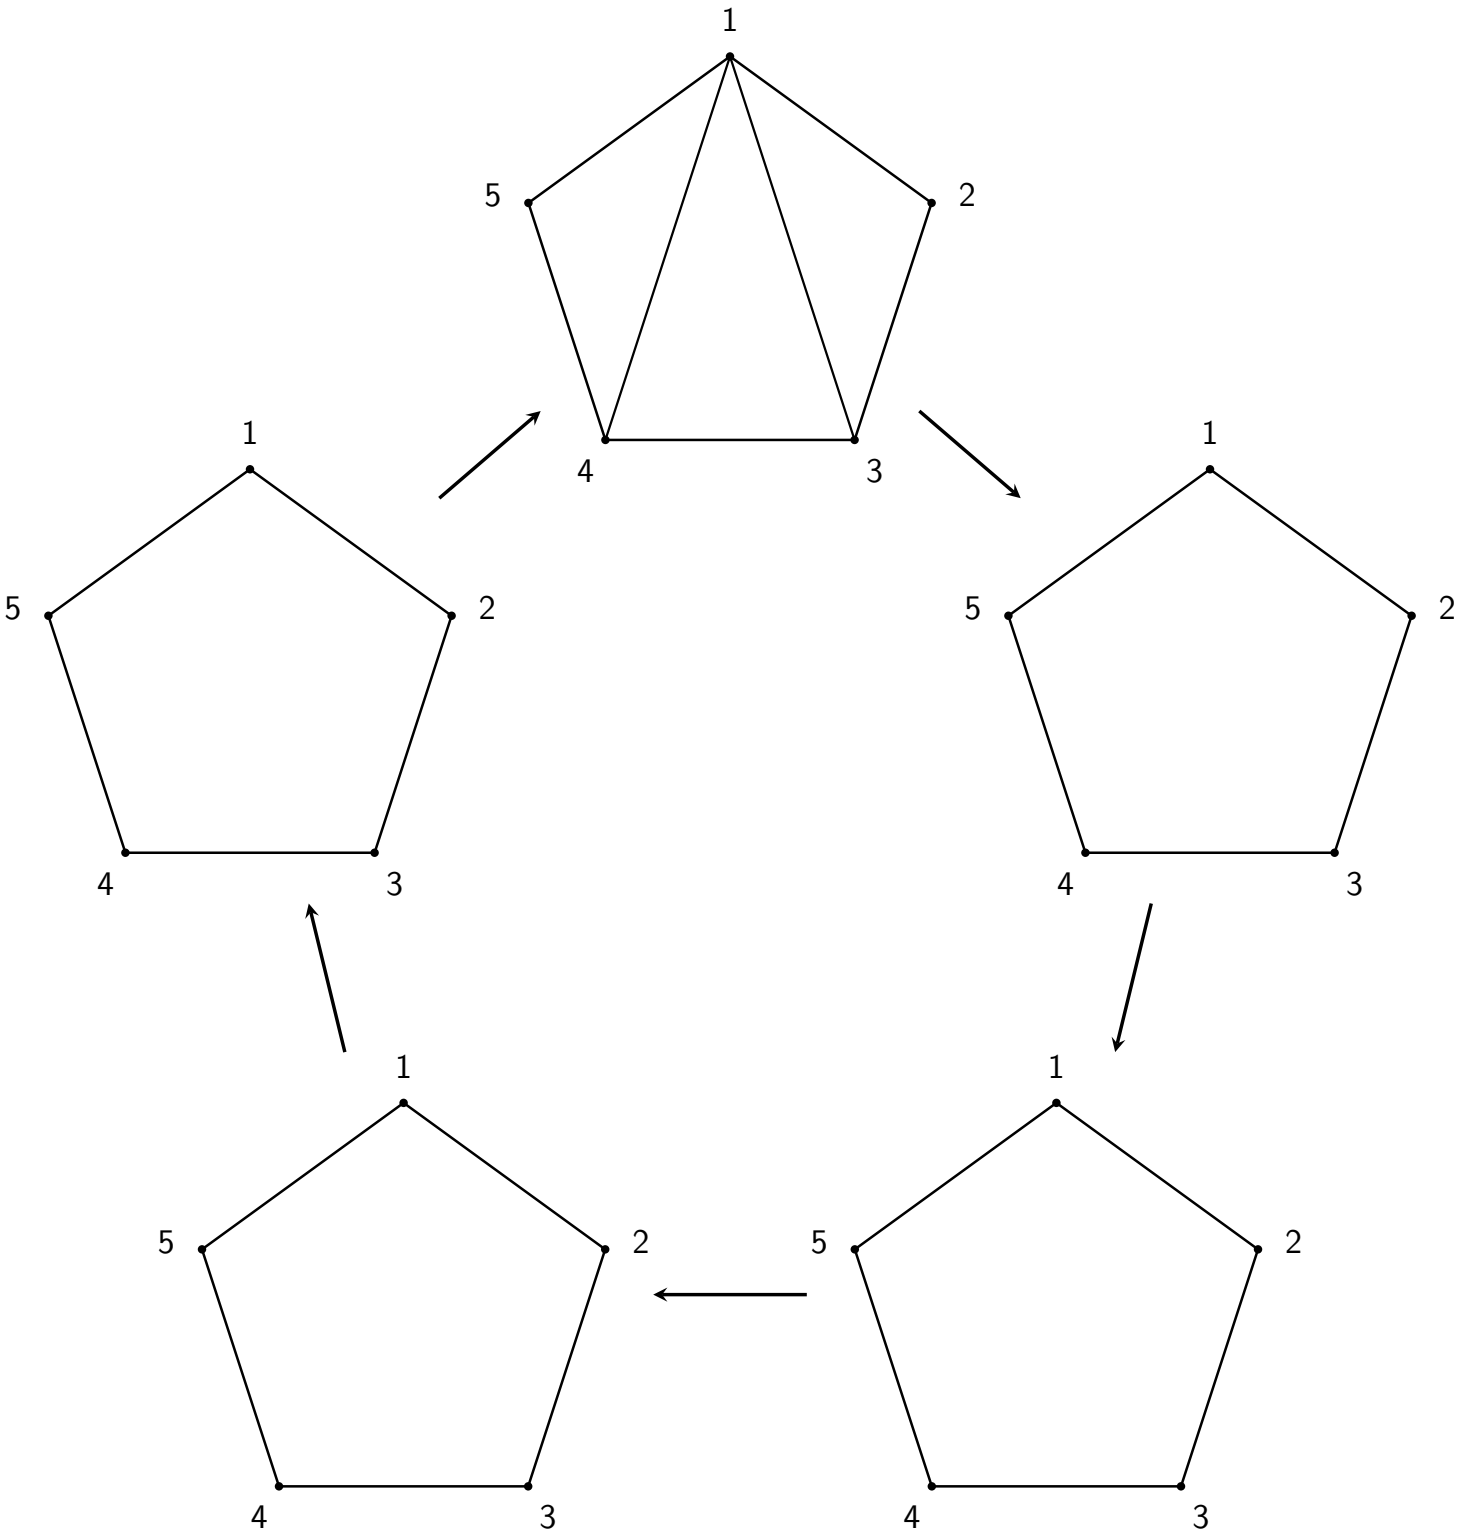

Problem 6: Follow the arrows, changing one inside line each time. Can you fill every shape differently and come back to the top filling with one last change?
