Put one R, B, or Y counter on every dot. Keep the corner letters. Each outside side allows only the letters beside it. A little triangle has no lines inside.

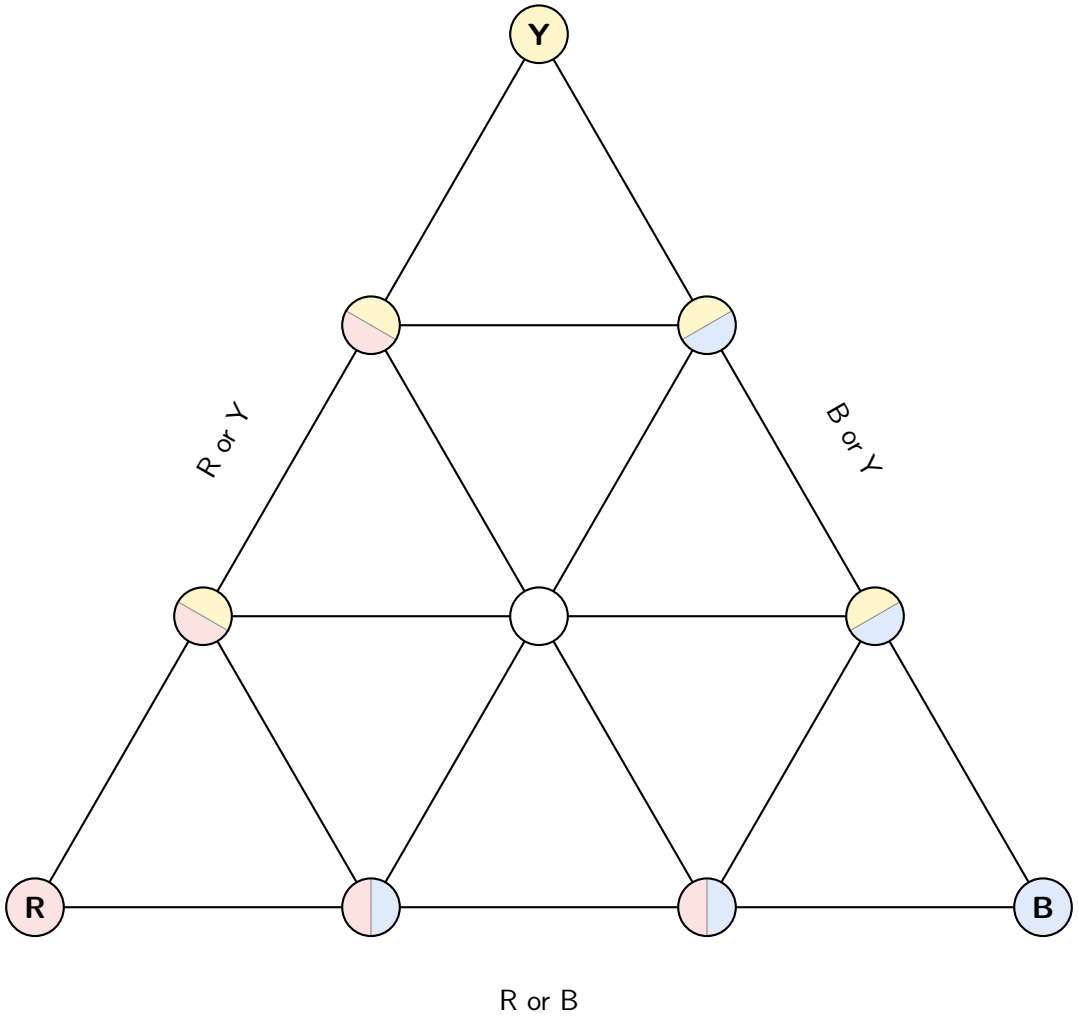

Problem 1: Fill the dots with counters. Move the counters so the little triangle with R, B, and Y is in a new place. Find all four places.

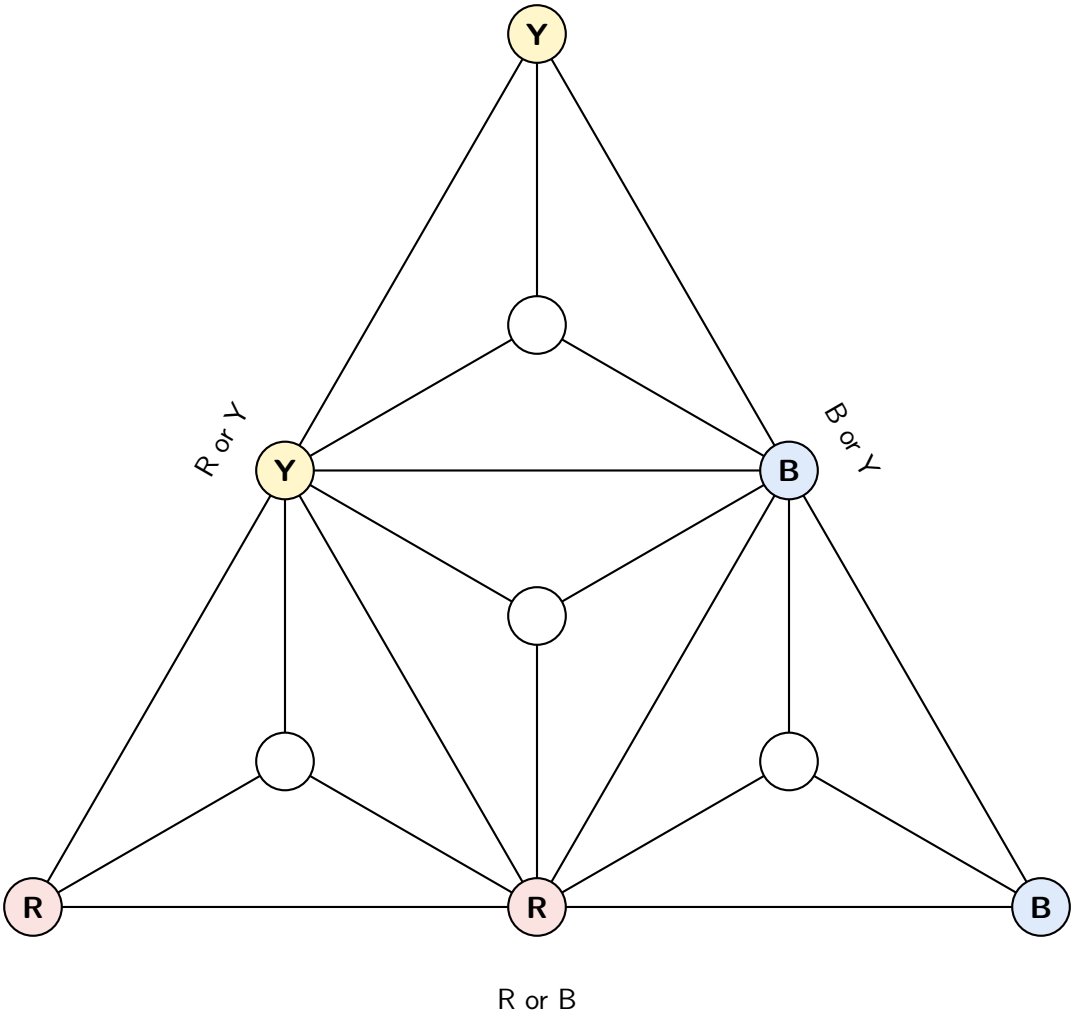

Problem 2: Play with a partner. One of you fills the dots and tries to make no little triangle with R, B, and Y. The other hunts for one. Swap and play again. Can the filler ever win?

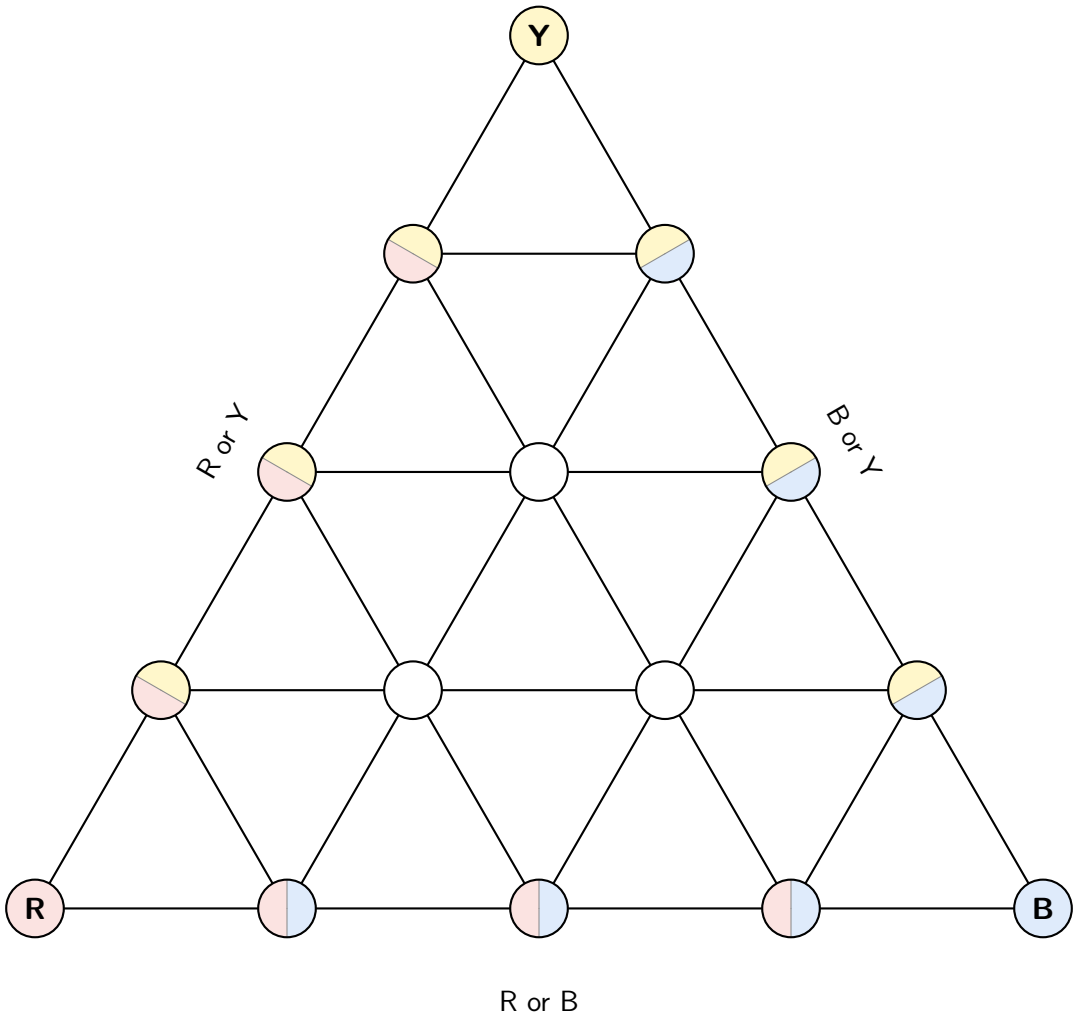

Problem 3: Fill the dots to make as many little triangles with R, B, and Y as you can.

Problem 4: Keep every printed letter. Fill the empty dots to make as many little triangles with R, B, and Y as you can.

Problem 5: Make just one little triangle with R, B, and Y, and draw an X inside it. Move the counters to put it in as many other places as you can. Draw an X in each new place.

Problem 6: The bottom side now allows R, B, or Y. Find a filling with no little triangle that has R, B, and Y. Then find a different one.
