For folds, use the marked front: M means mountain and V means valley. Fold every ray in the finished pattern fully flat. Keep the disk whole, with no other creases. Loose wedges are for measuring.

Problem 1: Use the seven loose wedges to make half-turns. Find as many different groups of letters as you can; use each wedge at most once in a group.

Problem 2: Use the 16 separate loose wedges cut to match A1–A4, B1–B4, C1–C4, and D1–D4. For each disk, can the shaded pair fill a half-turn exactly, and can the white pair?

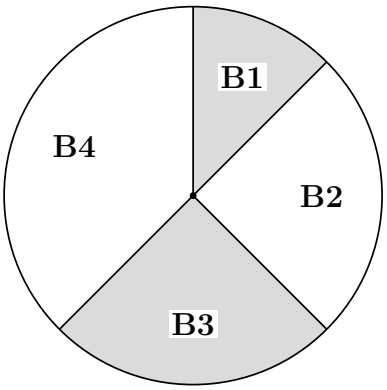

A

Shaded: _____

White: _____

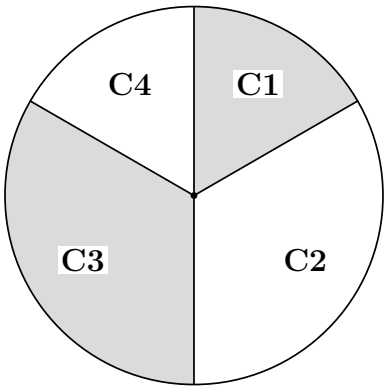

B

Shaded: _____

White: _____

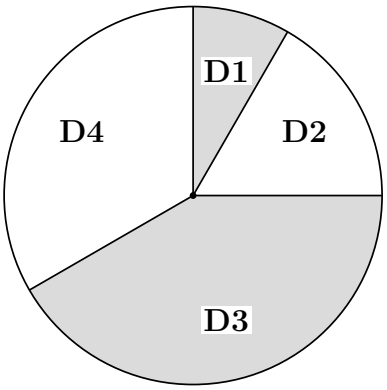

C

Shaded: _____

White: _____

D

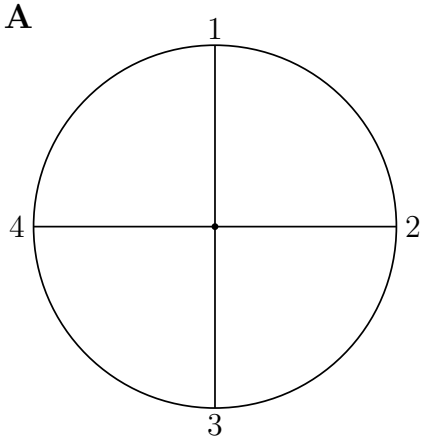

Shaded: _____

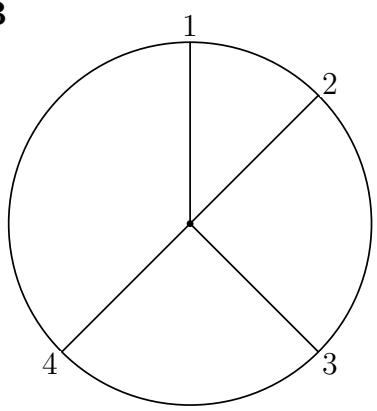

White: _____

Problem 3: Which of these disks can close flat along every ray? Make one flat fold of each disk that can close and mark its rays M or V; explain any exact mismatch.

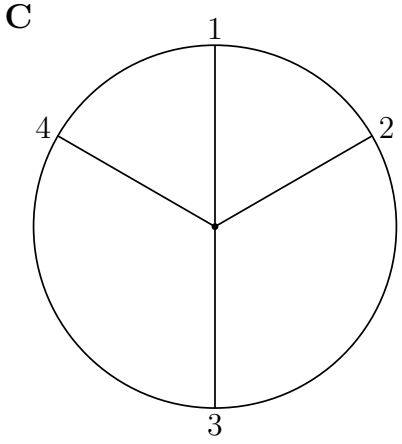

A

B

C

D
