Each favorite marker is one voter. Favorites stay still. Each voter chooses the nearer proposal, X or Y. Equal distances put that vote in Tie. More votes wins; equal vote counts give a tied vote. Use only the numbered ticks.

Fixed favorites; proposals X=2, Y=8

Distances to X / Y; choice

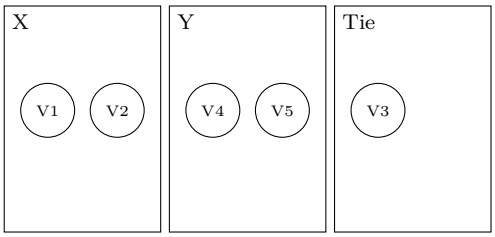

V1: 2 / 8 → X

V2: 1 / 7 → X

V3: 3 / 3 → Tie

V4: 6 / 0 → Y

V5: 8 / 2 → Y

Tied vote: 2 to 2; V3 in Tie.

Problem 4: Use just four voters, with these favorites. Find every location that never loses against another location. Is there any location that beats every other one?
