A route follows arrows from Start to Finish without visiting a dot twice. Routes may meet at dots, but each arrow can belong to only one route in a collection. Use a different color or line pattern for each route. A marker closes one arrow.

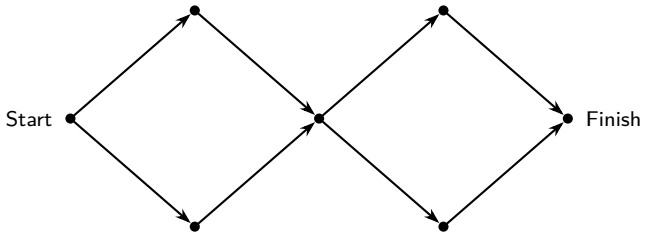

Problem 4: Close just one arrow at a time. Find every arrow you could close and still fit two routes.

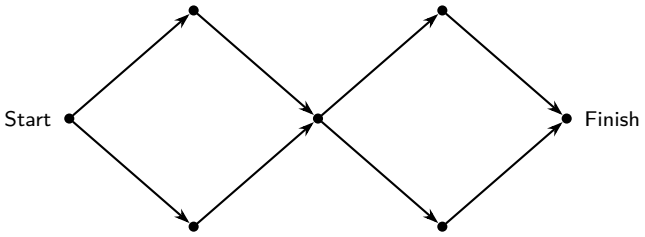

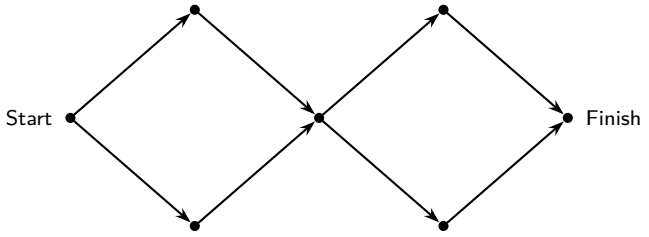

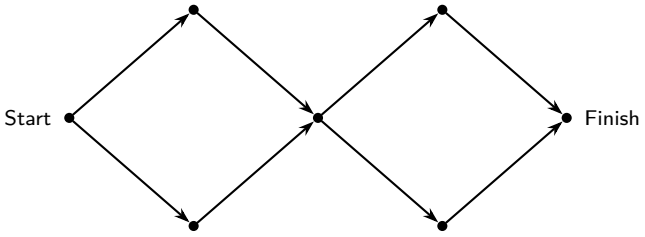

Problem 5: Stop every route with two markers. Find every different pair of arrows that works.

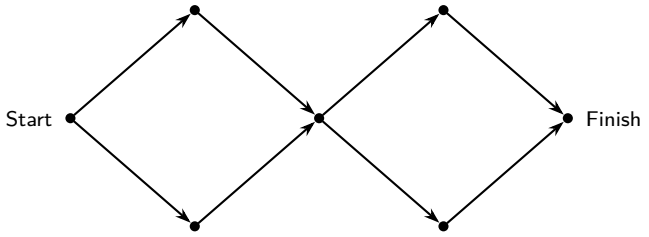

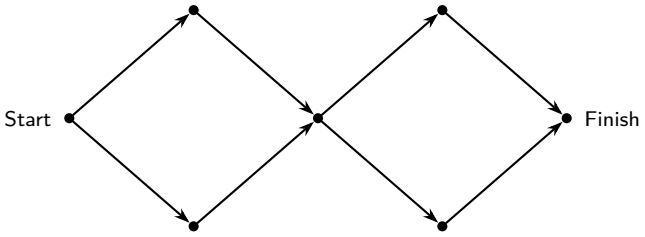

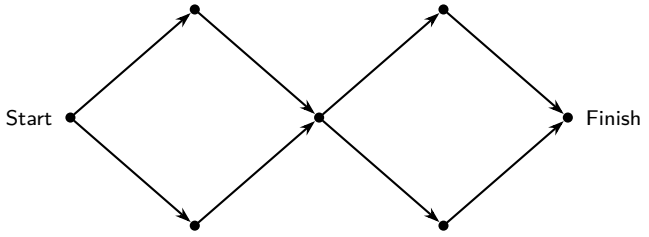

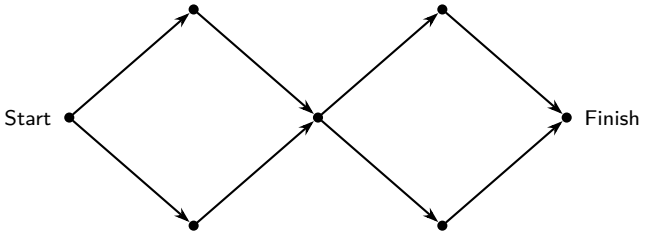

Problem 6: Two players take turns closing one open arrow; whoever leaves no route wins. On each board, would you rather go first or second, and how can you win?
