Put the towers on the dots, never two on one dot. Leave one dot empty. It counts as 0. A link measures how many cubes taller one tower is than the other. Write that number in the box on the link.

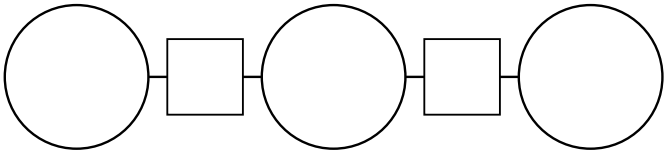

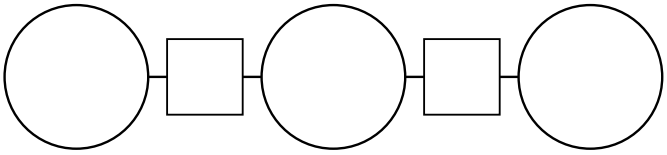

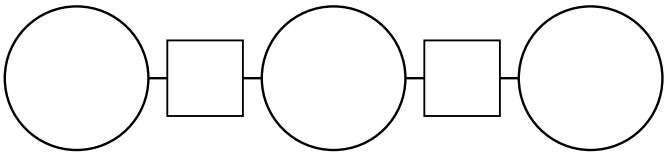

Problem 1: Make the links measure 1 and 2 with these towers. Find all the ways.

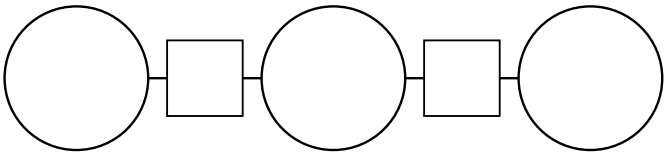

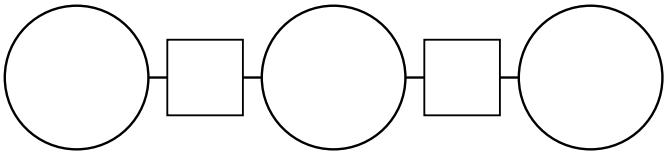

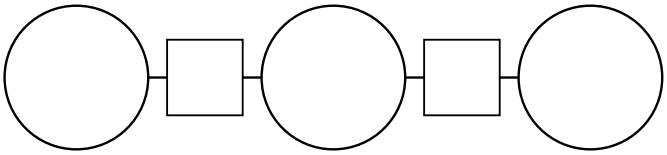

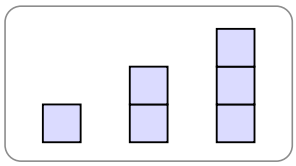

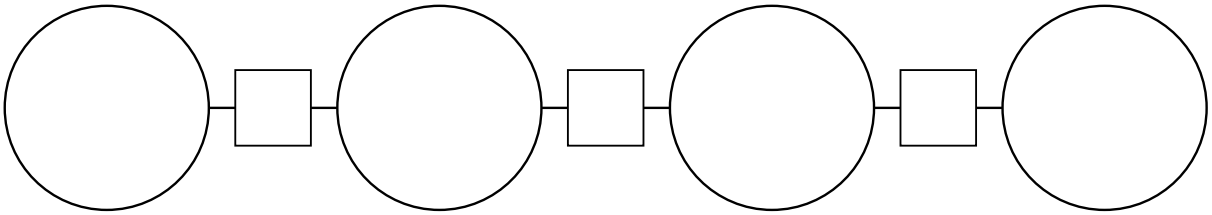

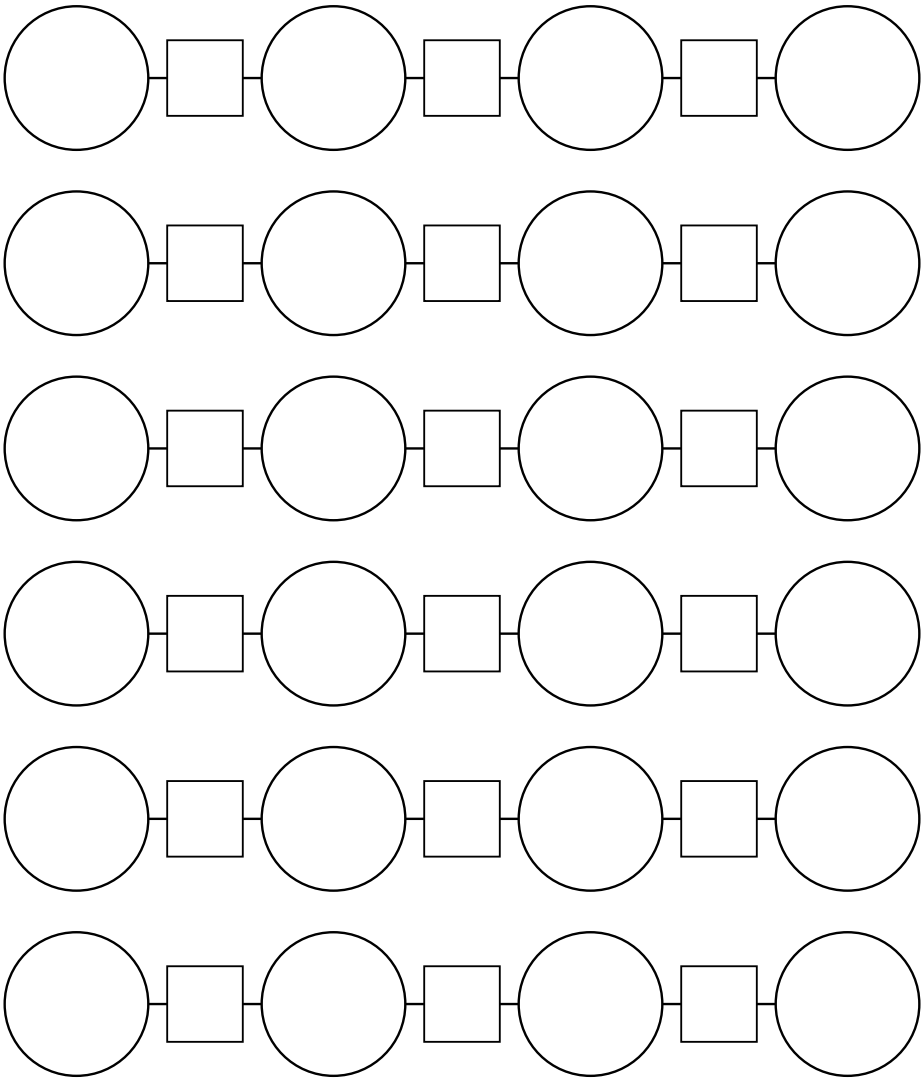

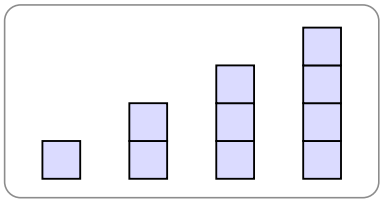

Problem 2: Make the links measure 1, 2 and 3 with these towers. Find all the ways.

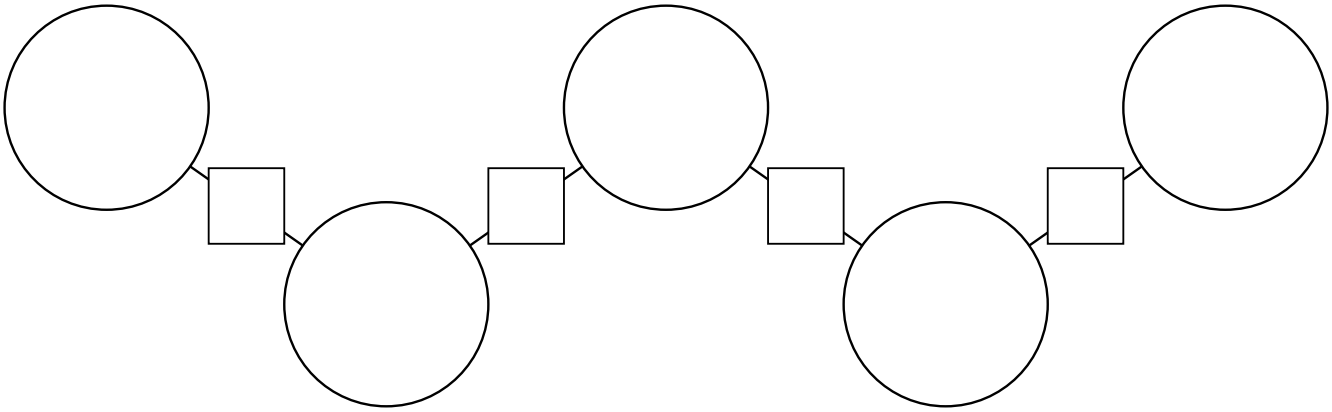

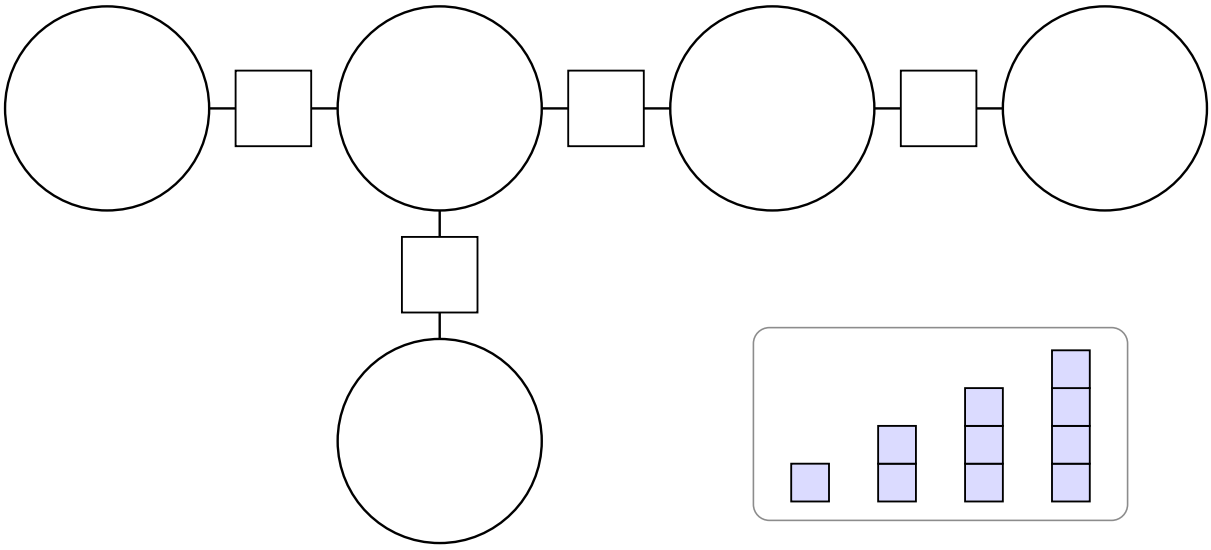

Problem 3: Make the links measure 1, 2, 3 and 4 with these towers.

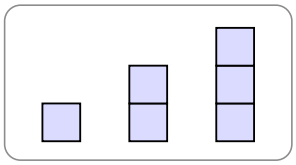

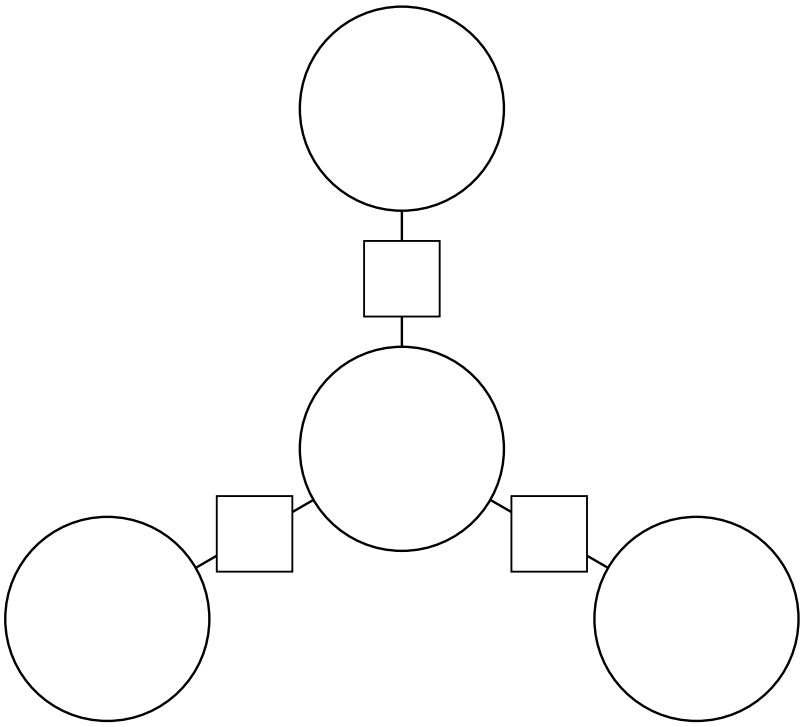

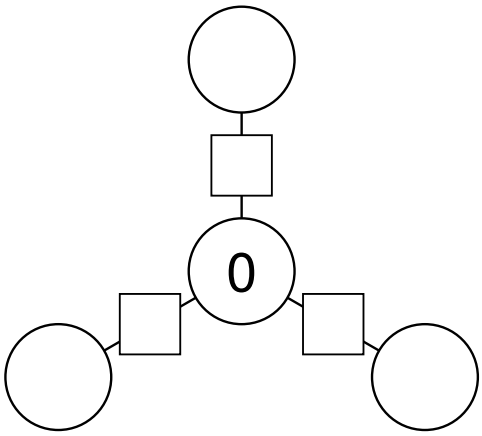

Problem 4: Make the links measure 1, 2, 3 and 4 with these towers.

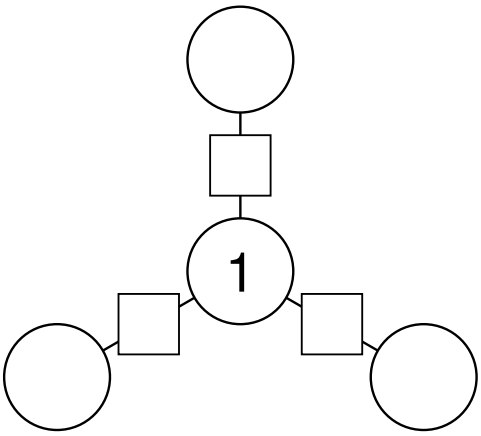

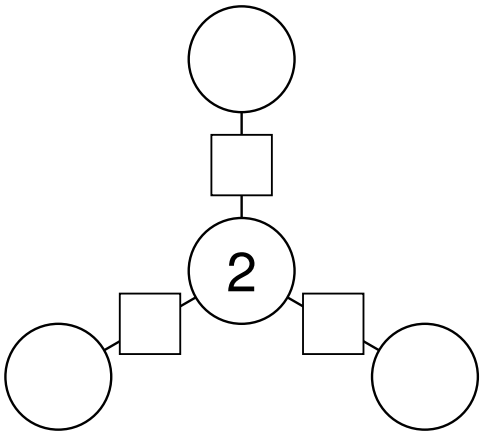

Problem 5: Make the links measure 1, 2 and 3 with these towers. Finish each small picture, or cross it out if it cannot be done.

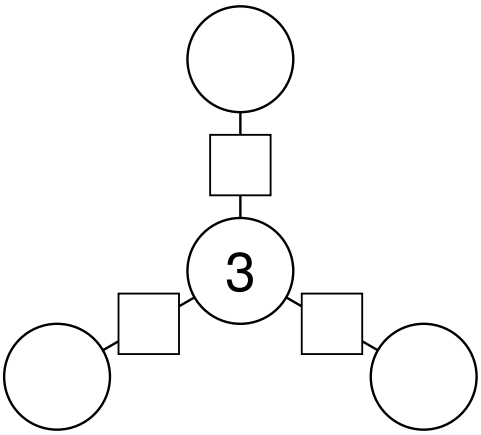

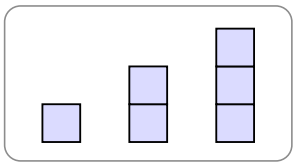

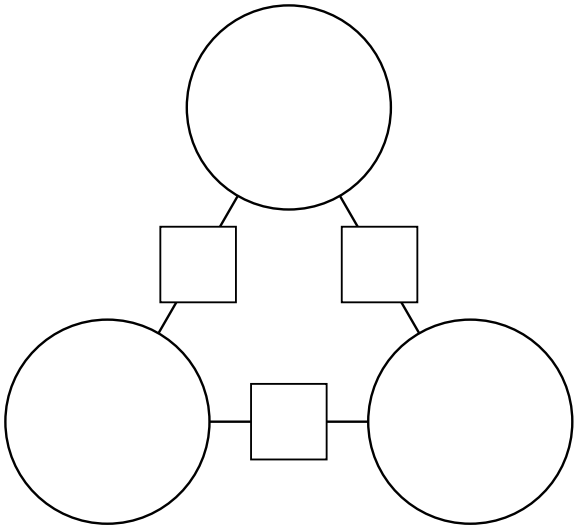

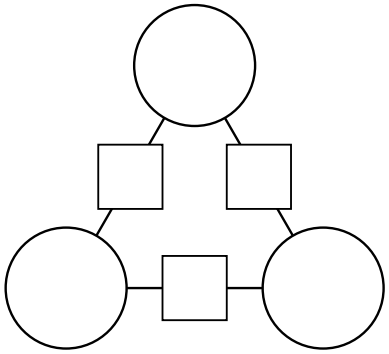

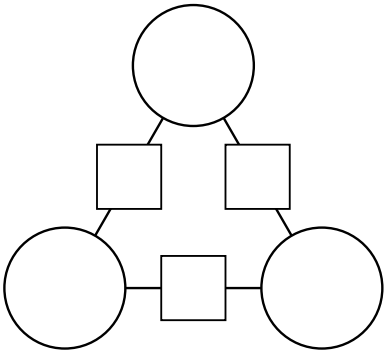

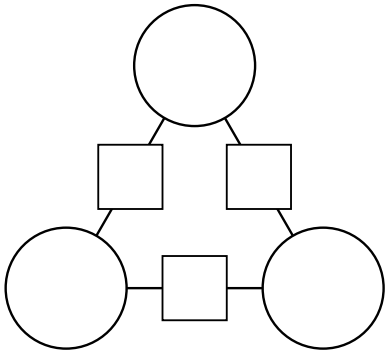

Problem 6: Make the links measure 1, 2 and 3 with these towers. Circle each tower that can be left over.

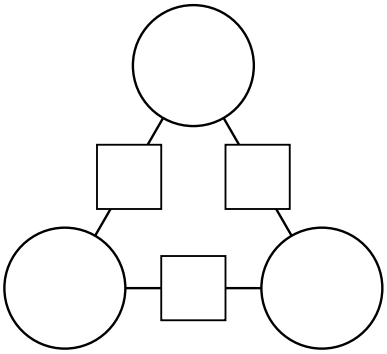

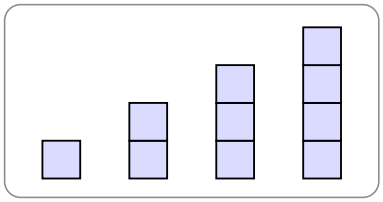

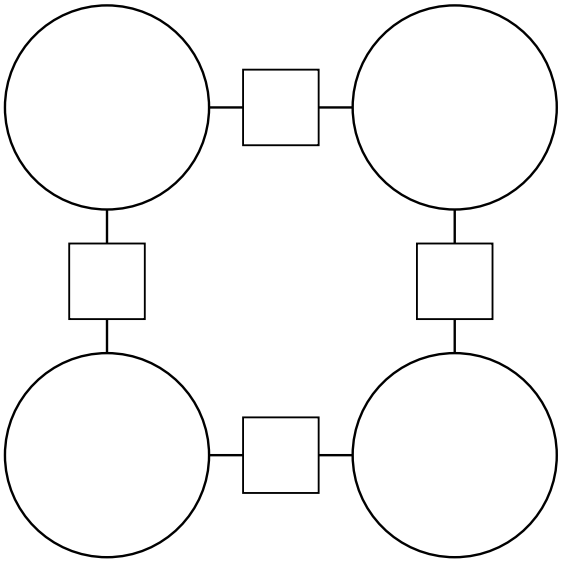

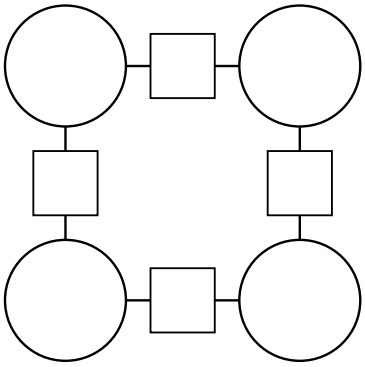

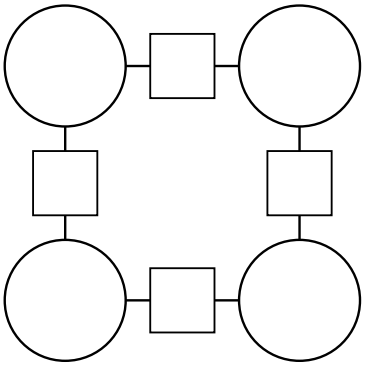

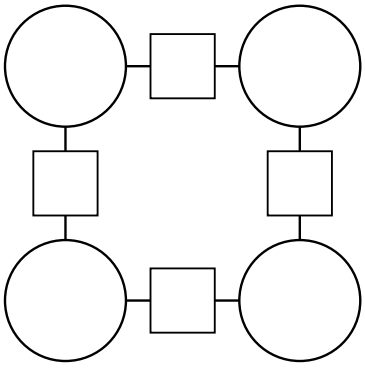

Problem 7: Make the links measure 1, 2, 3 and 4 with these towers. Circle each tower that can be left over.

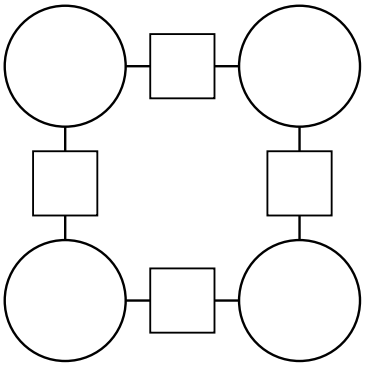

Problem 8: Make the links measure 1, 2, 3 and 4 with these towers. Which towers can stand on the middle dot?
