The small numbers match the six tickets. A secret ticket picks the face that shows, with its number covered. You see only the color.

Problem 1: Sort every ticket by its hidden color. Then find two tickets that show the same color but hide different colors.

Only tickets 1 and 3 are in the cup.

Problem 4: Add just one extra ticket to this chooser: 2, 4, 5, or 6. Among red-showing rounds, which hidden color has more ways before and after each addition?

Problem 5: Choose three tickets so red sometimes shows and then always hides blue. Find every choice that works.

Use all six face tickets again. Lay each card's two tickets on it, so removing a card takes both.

Problem 6: Remove one card so red showing always hides red. Can you remove a different card so red showing always hides blue?

Problem 7: Find every two-ticket cup where red showing gives a tie between the hidden colors. Red must sometimes show.
